

# Product Requirements Document

Independent portfolio case study · Sample SaaS workflow improvement

## Problem

Customers repeatedly need support assistance to complete a recurring operational workflow, increasing customer effort and avoidable support demand.

## Goal

Increase successful self-service completion while maintaining clarity, auditability and appropriate controls.

## Users

Primary operational users; secondary customer administrators, Support, Customer Success and Product Operations.

## Requirements

Clear entry point; fewer unnecessary steps; contextual guidance; understandable error states; event instrumentation; documented edge cases and permissions.

## Acceptance criteria

Representative users can complete the core workflow without support intervention; errors clearly state corrective action; completion and abandonment are measurable.

## Rollout

Pilot with a small cohort. Compare completion rate, repeat contacts and qualitative feedback against baseline. Expand after resolving material edge cases.

## Case Study Disclaimer

This project uses simulated data and scenarios to demonstrate my methodology, decision-making, and approach to solving real-world customer success challenges.
